Data Source: Maine Mortality Database; Data, Research, and Vital Records Program, Maine CDC.

Coronary heart disease deaths are defined as deaths in which the underlying cause of death was coded as I20-I25.

Crude rates are deaths per 100,000 population.

Age-adjusted rates are deaths per 100,000 population age-adjusted to the U.S. 2000 standard population.

95% CI: 95% confidence interval of the rate.

\*Rates are flagged as unreliable when the rate is calculated with a numerator of 20 or less.

NApp = Not applicable, age-adjusted rates are not calculated for age-specific groups; NA = not available
